Store info on client data

DB
(optional)

Database
(Mongoose)

IFT
(API Syntax)

IFT/WALMART
Centralized Project

Back-end

Server.js
Express.js

This receives input from the
Front edd. It then attempts to
create a IFT category and
an L8M customer account.

Front-End

React.js

This is the face of our project.
It needs to be able to accept
inputs, validate inputs, then
send the inputs as a .Json
to the server.js
